# Components of a robot system

- Mechanical Arm  
Robot joint, wrist, base; sufficient structural stability with the payload
- Drive systems  
Motor, Hydraulic, Pneumatic Drive, Gear, Break
- Control system  
Interface to operator; Control of robot's joint
- End-effector, End-of-Arm Tooling (EOAT)  
Special Tools; adapted to the application; Gripper, etc.
- Programming tool  
Teach-Panel, Movement of joints, Record of points, Generation of Programs, Not-Stop, and others.

# Gripping Devices

- Interface between IR and work piece
- Gripping Device = „*Part of a handling device which to grasp an object, usually the work part, and hold it during the robot work cycle.*”
  - *Holding method: mechanical (for example, finger), suction cups, magnets, etc.*
- In practice special solutions for few distinct applications
  - å Flexibility of the whole system reduced

# Gripping Devices

**3-Finger-Centric  
gripper**

**2-Finger-Angle  
gripper**

**Needle  
gripper**

# Type of control

- Point-to-Point (PTP)
  - Starting and end point are given by the controller. After starting movement each joint moves independently. In general joints are moving synchronously.
- Multi point (MP)
  - The position values are provided in predefined tact as the setpoint value to joint. (programming of setpoint value: sequential programming)
  - Disadvantage : memory intensive, The path can be hardly corrected.
- Continuous path
  - The path from starting point and end point is calculated with linear, circular, spline interpolation spatially. The calculation of setpoint value is carried out on-line (in millisecond interval)

# Tasks of the control computer

- Coordinate transformation
- Path calculation
- Speed and acceleration calculation
- Position control

↳ Hierarchical structure

# Position control (1)

- Exact and reproducible (0,01 to 2 mm)
- High positioning speed
- High accuracy
- Large speed range

# Position control (2)

Time-optimal positioning  
from  $x_0$  to  $x_1$

# Programming Methods

# Modes of operation of a robot control

- Programming
  - Movement of robots through driving commands
  - Single step
  - Cycle
- Testing operation
  - Exiting from program (sections) in individual steps
  - Speed <25 cm / sec (Safety gate open)
- Automatically operations
  - In production facility
  - Programs are in full speed with all functions
  - Safety gate must be closed

# Example for a Robot Controller

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# External Sensors

# Sensor

Definition: A system that physical quantities  
and their  
changes transform in electronic signals in  
suitable formats.

# Sensors

- Elementar sensors
  - Inclusion of a size measuring and mapping signal
- Integrated sensors
  - additional signal processing: amplification, filtering, linearization, standardization
- Intelligent sensors
  - integrated sensor with additional signal processing: amplification, filtering, linearization, standardization sensor with computer analysis. Output: processed size. Example: Model recognition

# Classification by functionality

- Capturing the internal states
  - Speed sensors
  - Position sensors

- ☐ Information of the states environment
  - Visual sensors
  - Distance sensors

# Video-Optical Sensors

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Force-/Torque-Sensor

Belastung =  $F_x$   
 $F_x = f(U_1 + U_2 + U_3 + U_4)$

Fall A

Belastung =  $F_y$  oder  $F_z$   
 $F_y = f(U_6)$   
 $F_z = f(U_7)$

Fall B

Belastung =  $M_x$   
 $M_x = f(U_5)$

Fall C

Belastung =  $M_y$  oder  $M_z$   
 $M_y = f(U_1 - U_3)$   
 $M_z = f(U_2 - U_4)$

Fall D

Force-/Torque-Sensor in form of a spoke wheel with strain gauges

# Application Areas of Robots

|                                           |                    |                               |

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# External Sensors

# Sensors for mobile robots

- Features
  - Field of view and range
  - Accuracy, repeatability and resolution
  - Responsiveness in the target domain
  - Power consumption
  - Hardware reliability
  - Size

# Ultrasonic sensors

- Proximity sensors
- Distance sensors

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Tactile Sensors

- *Main idea: Copy of the human sense*
- **Measurement values:**
- Presence
- Form, Position and orientation of a part
- Pressure and Pressure distribution ( on contact area )
- Force: Value, Position and Orientation
- Torque moment: Value, area and Orientation

# Sensors for IR-movement control

- With contact
  - Force-Torque
    - Measurement - Gripping Force
    - Measurement –Force/Torque
    - Active Assembly Gripper,
    - RCC, IRCC
  - Tactile
    - Switch,
    - Distance measurement
    - Sample line or matrix
    - Area switch
    - Slip measurement
- Without contact
  - Video optical
    - 2D-image processing
    - Binary, Grey scale
    - 3D-Stereo-image processing
    - Active lightening
  - Optical distance measurement
    - Light barriers and –switch
    - 1D-Abstand, 2D-, 3D-Scanner
    - Lightcut
  - Ultrasonic
    - Proximity switches and barriers
    - Distance, Scanner
  - Inductive, capazitive, magnetic
    - Distance measurement
    - Welding path recognition
  - Various
    - Microwave
    - Pneumatic
    - Nuclear
    - Chemical

# Autonomy Definition

## Features

- Communication with the environment
- Autonomous generation of action plans for a distinct task
- Automatic execution and monitoring of the action plans
- Own understanding of the environment by means of sensor information and internal models
- Reaction on unpredictable situations.

# Application of Image Processing in Industry

- Position recognition
- Robot control
- Surface inspection
- Measurement and testing
- Completeness detection
- Packaging inspection
- Label inspection and reading
- Accesscontrol
- Vehicle control
- .....

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Tasks of Navigation

- **Bringing a moving object**
- **from a start position**
- **based on partially** incomplete information
- **considering** several, partially known limit conditions
- **to a distinct goal**

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Features of Navigation

- Collision free path
- minimum path length
- minimum travel time
- minimum computing time for the calculation of the path
- Safety aspects
- Efficient work in unknown environment.

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Mapping and Localisation

Consists of two main components:

- Calculation of the actual position based on the distance covered
- Adjustment with the actual sensor data (Laserscanner, camera)

From these information a local map is generated.

# Control architecture 1/3

- Deliberative architecture
  - Sense – plan – act
  - World model is necessary
  - Task planning
    - Task specification
    - Task planning
  - Program synthesis
    - Motion planning
    - Trajectory planning

# Control architecture 2/3

- Reactive architecture
  - No planning only reaction on sensor data
- Advantages
  - Always up to date
  - Simple hardware
- Disadvantages
  - Complete tasks difficult to implement

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Control architecture 3/3

- Hybrid architecture
  - Combines deliberative and reactive architecture
  - Scheme based architecture
    - Motor scheme
    - Perceptual scheme

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Applications of mobile Robot Systems

- **Factory - Automation**

Transport e.g. components between the machining and assembling

- **Dangerous environment**

Landmine detection, roboter in a nuclear - reactor

- **Space**

e.g. Pathfinder at the Mars

- **Underwater**

exploitation, surveying

## Medical applications

- **„Service Robotes“ for personal use**

e.g. Cleaning robots

# Selected Applications

Underwater (UAV`s)  
Aerial  
Space  
Agriculture  
Construction  
Hazardous Environment  
Search and Rescue  
Domestic  
Education

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Autonomous Underwater Vehicles (AUV's)

## Example: „Autosub“

- purpose: oceanography, mapping, for example beneath sea ice
- length: 7 m, diameter 0,9 m
- batteries provide energy for 500 km range or 6 days endurance
- max. depth: 1600 meters
- sensor or data driven path determination and terrain following

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Flying Robots

## Example: TU Berlin's „Marvin“

designed for participation in  
the  
IARC 1998-2000  
(International  
Aerial Robotics Competition)  
autonomous flying robot,  
based on a helicopter-model  
permanent data link to  
basestation on ground  
GPS-navigatio  
sends a high-resolution digital  
image every 9 sec  
fire detection

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Inspirations

- Just as most of robots, flying robots are inspired in the nature, specially in the insects.

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Applications for Rescue

- Flying robots have also importance in **rescue missions**, accessing to dangerous places or small holes in rubble.

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Robots for Space Exploration

Example:  
„The Marsrovers“

- NASA's twin robot geologists, the „Mars Exploration Rovers“, launched toward Mars on June 10 and July 7, 2003, in search of answers about the history of water on Mars
- Moving from place to place, the rovers perform on-site geological investigations

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Rescue Robots

- Mini robots
- Bomb-squad robots
- Construction robots

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Bomb-squad Robots

- Most commonly used robot
- Used by militaries and bomb squads
- Used for bomb and mine defusing

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Toy Robots: AIBO

- Wireless connectivity
- AIBO's senses
  - *to see*
  - *to hear*
  - *to feel*
- AIBO's mind
- AIBO's expression
- Self-charge
- learning, ability to mature

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Personal Robot PaPeRo 2003

## Development

## Personal Robot PaPeRo 2003

**R100:** NEC develops first prototype that should communicate with human beings as one of the family members in **1997**

descendant **PaPeRo** named after „**Partnertyped Personal Robot**“ in year **2001**

latest improvement **2003** focused on sophisticated human-robot interaction

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

- **System Overview**

## *Hardware Platform*

**Navigation Computer** :PowerPc  
750 at 380 MHz

**Interaction Computer** :Pentium 3  
at 700 MHz  
under Windows 2000

## *Software Architecture*

- An Intel Pentium and a Motorola  
PowerPC board

**Hardware relation:** Sick LMS 200  
to the PowerPC **Safety:** the XO/2  
operating system

**Availability:** Windows-based  
machine

## ■ Navigation System

- graph-based global planning with feature-based localization
- an algorithm for obstacle avoidance combining the dynamic window approach (DWA) with an elastic band method.

**Localization:** conventional Extended Kalman Filter (EKF) localization approach

## ■ Human Robot Interaction

- Scenario Object Utility Language (SOUL) - People Tracking

- Visitors seen from the robot

happy, surprised and angry.

# Trends in Professional Service Robots

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Non professional Service Robotic Trends

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Application Examples

- HUMI
  - a Robot for Humanitarian Demining
- Robi Speed
  - a Mini Soccerrobot
- Roby Space
  - a Mini Robot for Space Applications

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# HUMANOID ROBOTS

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Humanoid Robots

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Introduction

- From engineering view point, human- being
  - Locomotion,
  - Navigation
  - Handling
  - Recognition
  - Sensing (5 senses)
  - Intelligent and autonomous system
  - Etc.
- Example, walking
  - Human-being, with muscles with our inner sensors
  - Robot, motors and gears and also sensors

# Research robot „COG” - MIT

# Research Humanoid Robot WABIAN – Waseda University, Japan

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# HRP-2 (AIST, Japan)

- Development (1998 – 2002)
- 1539 mm x 621 mm x 355 mm
- 58 Kg
- 30 DOF
  - 6 DOF / each leg
  - 6 DOF / each arm
  - 2 DOF / each hand
  - 2 DOF Waist
  - 2 DOF Head
- Sensor
  - Acceleration sensor
  - 6 axis force sensor for ankle and wrist
  - Three cameras (head)
  - DC servo motor with harmonic drive
  - NIMH Battery (48 V, 18AH)
- Capability to stand up by itself

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# „Professional“ humanoid Robots

- ASIMO (Honda)
  - SDR-4X (SONY)
  - QRIO (SONY)
  - TOYOTA
  - ...
- 
- Relatively expensive
  - For own PR purpose
  - „Closed“ Software

25.11.2011

# Humanoid robots

- Research humanoid robots
  - Developed by more than 500 research institutes as well as universities
  - With less budget as well as man power
  - Small, short step, no hands
- Professional humanoid robots
  - For own PR (Public Relation) purpose to promote the product, like Honda, Toyota
  - More budget and man power
  - Good walking, even running, stand up
  - Good hands
- Currently no real industrial applications

# Humanoid robot - ARCHIE

- Goals
  - Humanoid, two legged robot
  - Development of a reasonably cheap “personal” robots
  - supporting humans in every day life (working place, home, etc.)
- Application areas
  - Humanitarian Demining
    - Outdoor – rough terrain
  - Support for elderly and disabled people
- ARCHIE
  - a head,
  - a torso,
  - two arms,
  - two hands and
  - two legs.

25.11.2011

# Structure of Archie

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Future perspectives

- Implementation of the Control algorithms
- Improvement of simulator
- Walking mechanism
- Sensor based artificial intelligence
  - Vision system
  - Speech recognition
  - Man-Machine Interaction
- Other components
  - Arm, Finger, etc

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Development Trends

- Ubiquitous Robots
- Nano (Femto) Robots
- Bioinspired Robots
- Cloud robots
- Robots beyond 2020

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Bionic Underwater Robots

The **lamprey-based** robot imitates the natural locomotion of eel-type creatures. Undulatory propulsion is wakeless and of high efficiency

Lamprey-Based Undulatory Robot

The **lobster-robot** moves in the fashion of a real lobster and is intended for autonomous remote-sensing operations in rivers and ocean. Its bendable and pivoted antennae recognize obstacles and analyse the water current

Lobster-Robot

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Autonomous movement of the Lobster Robot

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Robot Swarms

## Characteristics and Advantages:

- ~ Many equal swarm members (up to millions of units)
- ~ Setup of individuals simple
- ~ Intelligence results from interactions
- ~ Stability against disturbance
- ~ No leader, simple rules

# Robot Swarms

## Example: Three Rules of Bird Swarms

1. Avoid Collisions!

2. Catch up with others!

3. Fly to center!

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Robot Swarms

## COROs “Stick-Pulling-Experiment”

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Robot Swarms

## Fields of Application

- ~ Humanitary help in large crisis regions
- ~ Search for victims of avalanches
- ~ Restrain oilslicks after tanker disasters
- ~ Remove landmines
- ~ Repairs in Space
- ~ Intelligent granulate as long-term perspective

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Bionics

“Bionics is the application of biological analogies for the study and design of engineering systems.”

**Robots similar to insects or spiders**

**Bionic haptic sensors**

**„Gecko-like“ adhesion effects**

## McKibben-Muscle

Advantages to pneumatic cylinder:

- ~ Weight loss 90 %
- ~ Higher achievable forces
- ~ Energy savings of 40 %
- ~ Hermetic impermeable  
(can be used in high-purity areas)

# Geckobot: A motor actuated robot inspired by the gecko lizard

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Water Strider: A miniature water strider robot

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Nanorobots's Tomorrow

In the future, nanorobots could revolutionize medicine. Doctors could treat everything from heart disease to cancer using tiny robots the size of bacteria, a scale much smaller than today's robots.

Robots might work alone or in teams to eradicate disease and treat other conditions. Some believe that semiautonomous nanorobots are right around the corner -- doctors would implant robots able to patrol a human's body, reacting to any problems that pop up. Unlike acute treatment, these robots would stay in the patient's body forever.

Although this 2-centimeter-long robot is an impressive achievement, future robots will be hundreds of times smaller.

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Cloud Computing

## Cloud Computing

❖ **Documents “live”**  
**In the cloud**  
(backed up and accessible  
anywhere)

❖ **Netbook**

❖ **Supercomputing:**  
(Heavy CPU or data-  
intensive processing  
handled by distributed  
network)

# Cloud Enabled Robotics

## Cloud-Enabled Robotics

### ❖ Recent Proposal:

“DavinCi: a cloud computing framework for service robots” [Arumugam, et. Al. , ICRA 2010]

- Hadoop cluster with ROS communication infrastructure
- FastSLAM map/reduce

# Benefits of “Cloud Robotics”

## Benefits of “Cloud Robotics”

- ❖ **Provides a shared knowledge data base**
  - Organizes and unifies information about the world in a format usable by robots
- ❖ **Offloads heavy computing tasks to the cloud**
  - Cheaper, lighter, easier-to maintain hardware (akin to desktop PC vs. a thin-client “notebook”)
  - Longer battery life
  - Less need for software pushes/updates
  - CPU hardware upgrades are invisible & hassle-free
- ❖ **Skill / Behavior Data base**
  - Reusable library of “skills” or behaviors that map to perceived task requirements / complex situations.
  - Data mining the history of all cloud-enabled robots

- End of Life ( EoL ) Management of Robots
- .....

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

## ■ INTRODUCTION

- We can forecast that in the XXI century humanity will coexist with the first alien intelligence we have ever come into contact with - robots. It will be an event rich in ethical, social and economic problems.
- **The public is already asking questions such as:**
  - “Could a robot do "good" and "evil"?”
  - “Could robots be dangerous for humankind?”

## ■ ABOUT ROBOETHICS

## ■ Three Laws of Robotics from Isaac Asimov:

1. A robot may not injure a human being, or through inaction, allow a human being to come to harm.
2. A robot must obey the orders given it by human beings except where such orders would conflict with the First Law.
3. A robot must protect its own existence as long as such protection does not conflict with the First or Second Law.

## ■ Asimov added the **Fourth Law** (Law Zero):

4. No robot may harm humanity or, through inaction, allow humanity to come to harm.

# Top Reason of Investment in Robotic Market

25.11.2011

INVESTICE DO ROZVOJE VZDĚLÁVÁNÍ

# Global Trends in Robotic Market

1980 ~ 1990

- society was ready to accept robots
- industrial robots were popularized in car industry and hand wide applications.

1990 ~ 2000

- Improvement of production efficiency (welding, handling, inspection, painting, assembl, mounting, etc.).
- Attaching much importance to product quality
- Communication (between robots and other equipment)

2000 ~ 2012

- Safety standard was revised. (cooperative work with menhuman beings were enabled.)
- Cell manufacturing enabled production of many kinds of products..
- Accuracy improvement due to progress of robot-workpiece relative position control.

2012 ~ 2020

- Market of highly intelligent robot expanded sharply worldwide.
- Estimated sales of robots in Japanese market increased sharply.
- Expanding of interactive robot with simplified operation.
- Increase of sensor utilization, higher speed mommunication and more accurate sensors will be enbaled.
- Weight reduction (high rigidity) due to progress of material technology and improvement of mean power rate due to further progress of motor and drivers.
- estimated sales of robots in Japanese market moe than 6 trillion yen.
- Improved intelligence due to progress of offline teaching and interface technology for efficient information exchange between robots and human.
